

Module 9 – Case Study

Problem Statement:

You work for xyz organization. Your organization uses AWS cloud to host their web applications.

You have been asked to:

1. Create a Beanstalk environment to host a Custom PHP application to host our application on it.
 2. Upload a new PHP file which reads “Updated Hello World” to the Beanstalk environment
 3. Create a Lambda Function which uses S3 bucket Object creation as a trigger.
 4. Launch an OpsWork stack and host a Hello World html page in the instance of that stack
