

Module 8 Assignment 3 - CloudWatch

You have been asked to:

1. Create a dashboard which lets to check the CPU Utilization and NetworkIn for a particular EC2 instance

1. Open "CloudWatch" Console from Search bar. Click on "Create a default dashboard"
2. Click on "Create Dashboard"
3. Name the dashboard
4. Select "Explorer"

Add to this dashboard

☒ Pre-filled Explorer widget

Choose one of our ready made Explorer templates.

☐ Empty Explorer widget

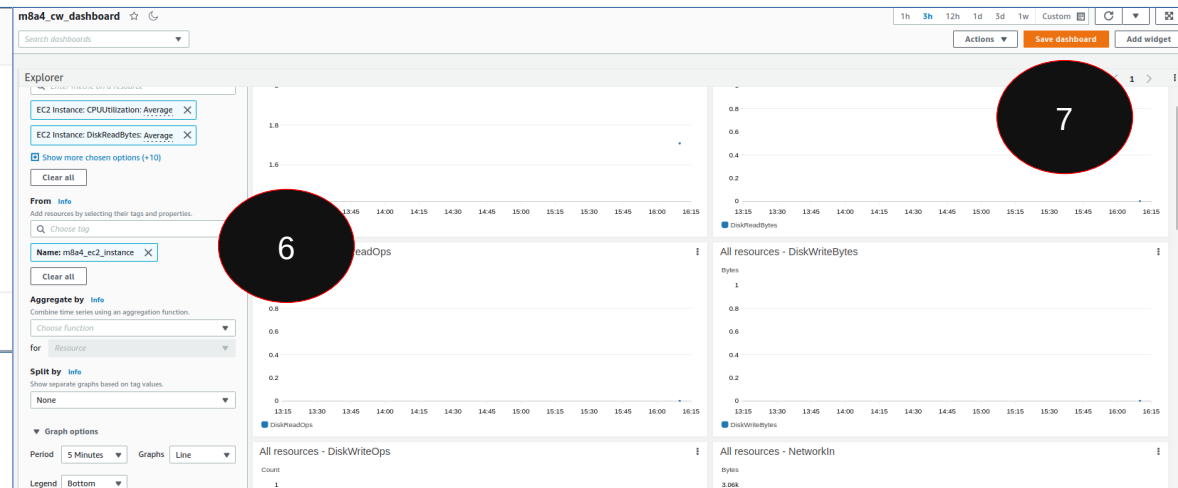

Start building your Explorer from scratch.

Choose template

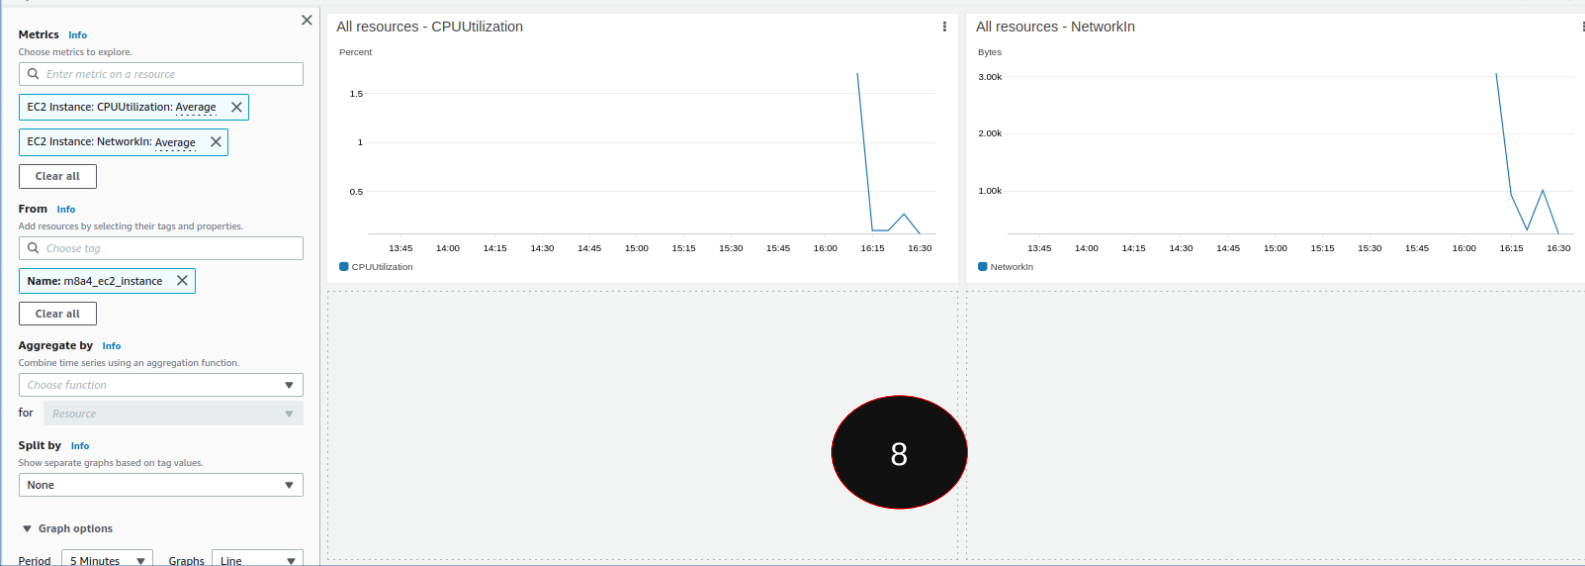

EC2

Cancel

Create

Explorer

5. Choose "EC2" as template
6. In the "From" box, choose the EC2 instance we already created earlier for this assignment – "m8a4_ec2_instance".
 - From "Metrics" ensure that "CPUUtilization" and "NetworkIn" are chosen. If needed, the other metrics can be deleted.
7. Save dashboard
8. The dashboard should look like this monitoring the 2 metrics asked in this assignment.
